

# Property and Casualty Insurance Class Action Update

2024 Q1

By Mark A. Johnson and Mathew G. Drocton

The first quarter of this year witnessed further development of existing theories underlying several types of property and casualty insurance class actions, as well as a few new claims. Below we summarize activity in class actions involving claims for (1) labor depreciation, (2) total loss vehicle valuation, (3) salvage vehicle titling, (4) premiums for uninsured motorist (UM) coverage, (5) COVID-19 premium refunds, (6) rate discrimination based on premium-setting software and (7) use of databases to measure reasonableness of healthcare providers' charges.

## Mixed Results in Labor Depreciation Class Actions

Multistate labor depreciation class actions continue to be tested. One district court denied a motion to dismiss for lack of standing when plaintiffs with insured properties in two states were asserting class claims on behalf of insureds in 15 other states.<sup>1</sup> While declaring that First Circuit principles preclude analysis of Article III standing using Rule 23 considerations, the court merged analysis of standing and a separate motion to strike class allegations and concluded that the named plaintiffs had standing to assert claims on behalf of class members in other states because the laws where their claims arose "are sufficiently parallel to the laws of fifteen states where their claims did not arise . . . ."<sup>2</sup> In so holding, the *Fassina* court departed from the approach of a court in another multistate labor depreciation class action, which declined to certify a class that included insureds from states in which the issue of labor depreciation had not been definitively resolved because the analysis for the unsettled states would necessitate interpreting varying state-specific contract laws, rendering a class action unworkable.<sup>3</sup>

The *Fassina* court also denied a motion to dismiss the named plaintiffs' claims, concluding that they plausibly alleged that labor depreciation is a component of the actual cash value (ACV) analysis for structural claims under Alabama and Maryland law. Therefore, the policy could be ambiguous and interpreted in the plaintiffs' favor.<sup>4</sup> The court also allowed Arizona plaintiffs to be added, finding that to enforce a one-year limitation clause in policies, under Arizona law the insurer had to show prejudice from delay in filing suit.<sup>5</sup> Query how that standard will work at class certification when applied to multiple Arizona putative class members.

Another district court ended resuscitation of a multistate labor depreciation class action after the court had denied class certification because of lack of adequacy of the named plaintiffs.<sup>6</sup> The court rejected a motion to intervene by a new plaintiff, refused to allow for pre-certification notice to putative class members and refused to give the plaintiffs time to find new class representatives.<sup>7</sup> The court was influenced in part by a pending multistate labor depreciation class action against the same insurer with some overlapping class claims.<sup>8</sup>

<sup>6</sup> *Goble v. Trumbull Ins. Co.*, No. 2:20-cv-5577, 2023 WL 9050956 (S.D. Ohio Dec. 29, 2023).

<sup>7</sup> *Goble v. Trumbull Ins. Co.*, No. 2:20-cv-5577, 2024 WL 1549456 (S.D. Ohio Apr. 10, 2024).

<sup>8</sup> *Grawe v. Trumbull Ins. Co.*, No. 3:23-cv-160 (D. Conn.).

<sup>1</sup> *Fassina v. Liberty Mut. Ins. Co.*, No. 22-cv-11466-DJC, 2024 WL 1018440 (D. Mass. Mar. 8, 2024); see also *Glasner v. American Economy Ins. Co.*, No. 21-cv-11047-DJC, 2024 WL 1018449 (D. Mass. Mar. 8, 2024) (parallel case).

<sup>2</sup> *Id.* at \*4-8.

<sup>3</sup> *Generation Changers Church v. Church Mut. Ins. Co.*, No. 3:21-cv-00764, 2023 WL 6206152 (M.D. Tenn. Sept. 22, 2023).

One federal district court recently agreed to reconsider its decision to rely on a Missouri intermediate appellate court decision, which held that the lack of reference to labor depreciation in a policy was ambiguous under Missouri law, contrary to an Eighth Circuit opinion.<sup>9</sup> But the court then came to the same conclusion – that the plaintiff had stated a plausible claim for relief under the state court decision.<sup>10</sup> While the court granted the insurer leave to file a petition for interlocutory appeal of the interplay between the court of appeals' interpretation of state law and that of an intermediate state court of appeals, the Eighth Circuit promptly denied the petition to appeal.<sup>11</sup>

Finally, a Texas labor depreciation alleged class action came to an end after the insurer had invoked the appraisal process.<sup>12</sup> By tendering payment of an appraisal award that did not deduct labor depreciation, the insured's breach of contract claim for failure to pay labor depreciation was barred. Unlike tender of a settlement offer payment that is not accepted, which does not moot a claim under U.S. Supreme Court doctrine,<sup>13</sup> payment of the claim after the contractually required appraisal process does bar the claim, even if the process has the effect of continually evading class action review.<sup>14</sup>

---

## Total Loss Valuation Class Actions Continue

The insurance industry received a big win in a long line of cases challenging vehicle valuation software.<sup>15</sup> In *Lewis*, the plaintiff alleged that the negative comparable vehicle condition adjustment in third-party valuation reports results in an undervaluation.<sup>16</sup> The district court granted certification of a class of insureds whose claims were adjusted with a third-party valuation report containing the adjustment, but the Third Circuit vacated the order for lack of standing.<sup>17</sup> The Third Circuit noted that the plaintiff received a positive condition adjustment for his vehicle and also negotiated a higher settlement during the adjustment process.<sup>18</sup> Together, these two amounts exceeded the complained-of condition adjustment, and thus the plaintiff did not suffer a financial injury.<sup>19</sup> In the same order, the Third Circuit affirmed certification of a second class: one of insureds that did not receive taxes and fees with their total loss settlement payment.<sup>20</sup> The court rejected the argument that the need for a file-by-file review renders a class administratively unfeasible, noting that "matching of records is precisely the sort of exercise we have found sufficiently administrable to satisfy ascertainability in other cases."<sup>21</sup>

A trio of district courts continued the trend of certifying classes of insureds whose valuations were impacted by projected sales adjustments (PSAs).<sup>22</sup> But not all courts have uniformly granted certification. Most recently, an Arizona district court denied certification of a PSA class on predominance grounds.<sup>23</sup> The court reasoned that "determining whether Plaintiffs were paid less than ACV [will be] difficult to determine on a class wide basis" because there are numerous valuation methodologies and the insurer "is not bound to use any one ACV methodology."<sup>24</sup> On the merits side, insurers suffered a setback: A court denied an insurer's motion for summary judgment and allowed the plaintiff's theory that PSAs are not a proper element of ACV to move forward.<sup>25</sup>

Appraisal clauses continue to be a useful tool for insurers in defending class actions challenging valuation methodology. In a case challenging the methodology of a third-party valuation tool, a Michigan district court ordered the parties to appraisal and stayed proceedings.<sup>26</sup>

## Salvage Vehicle Titling Class Action Rejected

In an interesting theory, an automobile consumer filed a class action against an insurer for alleged mistitling of totaled vehicles.<sup>27</sup> The plaintiff alleged that the insurer purchased the salvage vehicle of its insured, instructed its salvage company to obtain a clean title and then sold the vehicle to a vendor, from whom the consumer plaintiff ultimately purchased the vehicle.<sup>28</sup> On theories of fraud and negligence, the plaintiff sought to certify a class of Missouri consumers who purchased salvage vehicles previously sold by the insurer.<sup>29</sup> The court rejected class certification, finding that proving reliance for the fraud claim and causation for the negligence claim was rife with individualized issues.<sup>30</sup>

---

## Certification Denied for Uninsured Motorist Class Action

The Tenth Circuit rejected a theory challenging an insurer's practices of accepting premiums for multiple uninsured motorist (UM) policies but disallowing stacking of UM coverage.<sup>31</sup> The insurer had issued tripartite UM coverage, which covered the insureds, guest

passengers and resident relatives.<sup>32</sup> The insured and resident relative received the highest UM coverage available (regardless of the vehicle being operated at the time of accident), while the guest passenger received UM coverage only while the vehicle was being operated.<sup>33</sup> The plaintiffs argued that the insurer breached the policy by accepting premiums while providing “different, less valuable” coverage” for guest passengers.<sup>34</sup> But the Tenth Circuit rejected the notion that a bad bargain amounts to a breach of contract: “At bottom, claimants agreed to pay the separate premiums despite State Farm’s ‘disclos[ure]’ that the UM coverage would not stack. State Farm may have offered claimants a bad deal, but they agreed to it.”<sup>35</sup>

---

## COVID-19 Premium Refund Class Actions Flagging

The past few years have seen several class actions claiming that insurers’ pandemic-era premium refunds because of lower risks were insufficient, but two more were finally resolved in the insurers’ favor. The court in *Day v. Geico Casualty Co.* had previously rejected arguments that claims seeking refunds of premiums were barred by the filed rate doctrine and had certified a class.<sup>36</sup> With only a California Unfair Competition Law (UCL) claim pending,<sup>37</sup> the court recently granted the insurer’s renewed motion for summary judgment and dismissed the remaining claim asserted by the class.<sup>38</sup> While the court rejected an argument that the insurer was entitled to rely on a UCL safe harbor because it was required to use a rate approved by the insurance commissioner, the court concluded that according to either a tethering or balancing test under the UCL, the refund amounts were not unfair and thus did not violate the statute.<sup>39</sup>

In *Boobuli’s LLC v. State Farm Fire and Cas. Co.*, another California district court had also previously rejected application of the filed rate doctrine in denying a motion to dismiss.<sup>40</sup> More recently, that court granted the insurer’s motion for summary judgment, holding that the “essential defect in [the plaintiff’s] case is that it cannot show that State Farm’s conduct was unfair or inequitable.”<sup>41</sup> Because the insurer presented evidence that it incurred underwriting losses, not profits, on business owners’ policies during the pandemic, and that the plaintiff had received a 40-percent adjustment of its rated liability exposure for coverage, the insured’s claims failed.<sup>42</sup>

Class certification was denied for claims for excessive auto insurance premiums during the pandemic in *Thomas v. GEICO*.<sup>43</sup>

43 No. 20-cv-04306, 2024 WL 1075151 (N.D. Ill. Mar. 12, 2024).

After allowing a claim for violation of the Illinois Consumer Fraud and Deceptive Business Practices Act to proceed, based in part on alleged statements by the insurer about savings,<sup>44</sup> the court found that the plaintiffs had not established how they could prove a common injury.<sup>45</sup> And the plaintiffs’ damages model failed to meet predominance under Rule 23(b)(3) since their expert incorrectly calculated purportedly correct rates based on past returns rather than estimated future costs, the latter of which comports with insurance industry norm.<sup>46</sup>

---

## Class Certification Denied for Rate Discrimination Claims

*Shannon v. Allstate Ins. Co.* challenged as unfairly discriminatory under Texas statute the insurer’s use of algorithms that allegedly projected “whether and how much premium each policyholder will tolerate being charged and still remain” as a customer.<sup>47</sup> In an extensive analysis, a federal magistrate judge recommended denying the plaintiffs’ motion for class certification, relying in part on the Department of Insurance’s extensive review of retention models in the insurer’s rating program.<sup>48</sup>

The court found that the statute sued under clearly required comparators, but because the plaintiffs failed to present evidence that they or any other policyholder had essentially the same risk as another who was charged different premiums, or the premiums such other insureds were charged, commonality under Rule 23(a)(2) was lacking.<sup>49</sup> For similar reasons, predominance under Rule 23(b)(3) was not met because the core issue of whether similarly situated policyholders were charged different premiums for similar risks would require individual analysis, and the plaintiffs’ damages methodology incorrectly assumed that a rate other than what was charged was available.<sup>50</sup> The court concluded that the filed rate doctrine led to a lack of superiority under Rule 23(b)(3), as the Department of Insurance had already reviewed the insurer’s use of retention models in rating factors and did not declare them to be unfairly discriminatory.<sup>51</sup>

## Washington Approves Use of Healthcare Database To Measure Reasonableness of Bills

In an alleged class action brought by a healthcare provider, the Washington Supreme Court held that measuring the reasonableness of providers’ charges by not exceeding the 80th percentile of a database of healthcare charges is not unfair under the Washington Consumer Protection Act.<sup>52</sup> In doing so, the court criticized

an earlier contrary holding of a court of appeals in *Folweiler Chiropractic, PS v. American Family Insurance Co.*, which had fueled class actions by providers against insurers challenging similar use of objective measurements of charges compared with those in databases.<sup>53</sup> The *Schiff* court concluded that the trigger for liability under the statute was reasonableness and the burden was on insurers to create their own reasonable standards for investigation of claims. Because comparing charges for the same treatment in the same geographic area was relevant to determining reasonableness using an “objective formulaic review process,” the 80th percentile practice was not universally unfair under the statute.<sup>54</sup>

## Takeaways

1. More multistate labor depreciation class actions will continue to be filed and challenged, with varying results depending on venue.
2. Total loss valuation cases continue to sway in favor of insurers, with the exception of PSA cases.
3. Plaintiffs are testing new theories regarding the titling process for totaled vehicles and the scope of UM coverage.
4. Remaining class actions challenging sufficiency of pandemic premium refunds are ending in favor of insurers.
5. Prior regulatory review of software used to assess premiums can be an important tool to defend against challenges to rates as discriminatory.
6. Washington courts now follow those of other states in approving use of databases to objectively measure reasonableness of healthcare providers’ charges.

<sup>53</sup> 5 Wash. App. 2d 829, 429 P.3d 813 (2018).

<sup>54</sup> *Schiff v. Liberty Mut. Fire Ins. Co.*, 542 P.3d 1002, ¶¶ 12, 19, 24.
